Caution regarding forward-looking statements

From time to time, Manulife Bank of Canada (“MBC” or the “Bank”) makes written and/or oral forward-looking statements, including in this presentation. In addition, our representatives may make forward-looking statements orally to investors, the media and others. All such statements are made pursuant to the “safe harbour” provisions of Canadian provincial securities laws.

The forward-looking statements in this document include, but are not limited to, statements relate to, among other things, our objectives, goals, strategies, intentions, plans, beliefs, expectations and estimates, and can generally be identified by the use of words such as “may”, “will”, “could”, “should”, “would”, “likely”, “suspect”, “outlook”, “expect”, “intend”, “estimate”, “anticipate”, “believe”, “plan”, “forecast”, “objective”, “seek”, “aim”, “continue”, “goal”, “restore”, “embark” and “endeavour” (or the negative thereof) and words and expressions of similar import, and include statements concerning possible or assumed future results. Although we believe that the expectations reflected in such forward-looking statements are reasonable, such statements involve risks and uncertainties, and undue reliance should not be placed on such statements and they should not be interpreted as confirming market’s expectations in any way.

Certain material factors or assumptions are applied in making forward-looking statements and actual results may differ materially from those expressed or implied in such statements. Important factors that could cause actual results to differ materially from expectations include but are not limited to: general business and economic conditions (including but not limited to the performance, volatility and correlation of equity markets, interest rates, credit and swap spreads, inflation rates, currency rates, investment losses and defaults, market liquidity, and creditworthiness of guarantors and counterparties); changes in laws and regulations; changes in accounting standards applicable in any of the territories in which we operate; changes in regulatory capital requirements; our ability to execute strategic plans and changes to strategic plans; downgrades in our financial strength; our ability to maintain our reputation; impairments of goodwill or intangible assets or the establishment of provisions against future tax assets; the accuracy of other estimates used in applying accounting policies, actuarial methods and embedded value methods; our ability to implement effective hedging strategies and unforeseen consequences arising from such strategies; our ability to source appropriate assets to back our long-dated liabilities; level of competition and consolidation; our ability to market and distribute products through current and future distribution channels; unforeseen liabilities or asset impairments arising from acquisitions and dispositions of businesses; the realization of losses arising from the sale of investments classified as fair value through other comprehensive income; our liquidity, including the availability of financing to satisfy existing financial liabilities on expected maturity dates when required; obligations to pledge additional collateral; the availability of letters of credit to provide capital management flexibility; accuracy of information received from counterparties and the ability of counterparties to meet their obligations; legal and regulatory proceedings, including tax audits, tax litigation or similar proceedings; our ability to adapt products and services to the changing market; our ability to attract and retain key executives, employees and agents; the appropriate use and interpretation of complex models or deficiencies in models used; political, legal, operational and other risks associated with our operations; geopolitical uncertainty, including international conflicts and trade disputes; acquisitions and our ability to complete acquisitions including the availability of equity and debt financing for this purpose; the disruption of or changes to key elements of the Bank’s or public infrastructure systems; environmental concerns, including climate change; and our ability to protect our intellectual property and exposure to claims of infringement and our inability to withdraw cash from subsidiaries.

The forward-looking statements in this document are, unless otherwise indicated, stated as of the date hereof and are presented for the purpose of assisting investors and others in understanding our financial position and results of operations, our future operations, as well as our objectives and strategic priorities, and may not be appropriate for other purposes. We do not undertake to update any forward-looking statements, except as required by law.

Overview

About Manulife Bank of Canada

Manulife Bank of Canada (“MBC” or the “Bank”) is a Schedule I federally chartered bank regulated by the Office of the Superintendent of Financial Institutions (“OSFI”). The Bank is categorized as a Category I Bank under OSFI’s Small and Medium-Sized Deposit-Taking Institutions (“SMSB”) Capital and Liquidity Requirements Guideline.

Manulife Bank is a wholly owned subsidiary of The Manufacturers Life Insurance Company (“MLI”), a wholly owned subsidiary of Manulife Financial Corporation (“MFC”). MFC is a publicly traded financial services group. The Bank and its wholly owned subsidiary, Manulife Trust Company (“MTC”), provide a wide range of financial products and services including mortgages and investment loans, and deposit products. MTC is a federally incorporated trust company licensed to operate in Canada with full trust and loan company powers under the Trust and Loan Companies Act (Canada) and is also regulated by OSFI. Platinum Canadian Mortgage Trust II (“PCMT II”) was established to provide financing for MBC mortgage products through securitization.

Financial Performance and Regulatory Disclosures

This document provides information on the Bank’s consolidated financial performance. Our consolidated regulatory capital requirements are determined by OSFI’s Capital Adequacy Requirements (CAR) guidelines, which are based on the Basel Committee on Banking Supervision’s Basel III framework. The Bank’s disclosure also aligns with OSFI’s Pillar 3 Disclosure Guideline for SMSBs, B-6 and B-20 guidelines. This disclosure is compiled in accordance with the final Capital Adequacy Requirements Guideline, Leverage Requirements Guideline, SMSB Capital and Liquidity Requirements, and Pillar 3 Disclosures for SMSBs issued by OSFI. These disclosures are intended to provide market participants with information regarding the risk profile of the Bank and the application of the Basel regulatory requirements, as well as information related to the Bank’s residential mortgage loans portfolios to enable market participants to evaluate the Bank’s residential mortgage underwriting standards.

The financial data presented in this document represents the consolidated financial results for the Bank, its subsidiary, MTC, and structured entity PCMT II. This report is unaudited and all amounts are reported in millions of Canadian dollars, unless otherwise indicated.

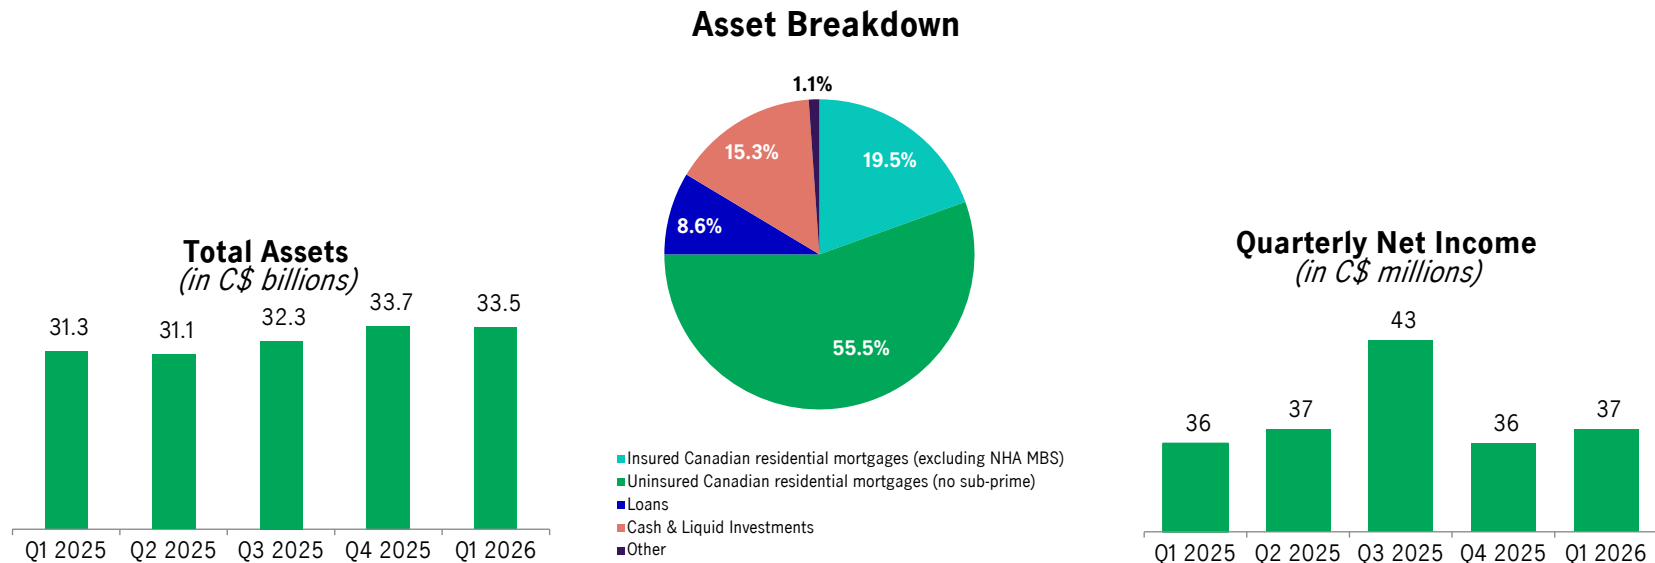

Additional financial information is also available on the OSFI Financial Data website at [Financial data - Office of the Superintendent of Financial Institutions \(osfi-bsif.gc.ca\)](https://osfi-bsif.gc.ca/financial-data).

Financial Performance

Financial performance information is provided to enable a reader to assess the Bank’s unaudited results of operations and financial condition for the three-month period ended March 31, 2026.

For the first quarter ended March 31, 2026, the Bank recorded net income of \$37 million, an increase of \$1 million, or 3%, from the prior quarter as well as from the prior year. The quarter over quarter increase mainly reflected net interest margin expansion driven by lower cost of funding, combined with higher gains on investment portfolio. The year over year increase was mainly due to increased net interest income from growth in net lending assets as well as higher gains on investment portfolio.

Assets totalled \$33.5 billion as at March 31, 2026 decreasing by \$0.2 billion, or 0.6%, as compared to December 31, 2025, primarily driven by a decrease in short-term investments, partially offset by growth in net lending assets due to higher mortgage and other loan asset balances. Compared to the prior year quarter ended March 31, 2025, assets increased by \$2.2 billion, or 7.0%, mostly due to higher lending assets, partially offset by a decrease in short-term investments.

The tables above are a summary of MBC's unaudited consolidated financial statements and are consistent with the unaudited consolidated financial statements filed with OSFI with classification differences due to summarization of results.

Q1 2026 efficiency ratio was 59.6%, compared to 61.5% in Q4 2025 and 58.6% reported as at March 31, 2025. The decrease compared to the prior quarter mainly reflected an increased net interest income and higher gains on investment portfolio. The increase over the prior year was driven by higher non-interest expenses, partially offset by higher revenue.

Capital

Basel III Common Equity Tier 1 (“CET1”) ratio, Tier 1 capital ratio and Total capital ratio were 14.9%, 16.8% and 16.9%, respectively, as at March 31, 2026, well in excess of minimum regulatory capital requirements. Management is confident that the Bank’s current level of capital is sufficient to support strategic objectives and ongoing growth.

Q1 2026 risk weighted assets were \$11.6 billion, an increase of \$0.2 billion, or 2%, as compared to the prior quarter; and an increase of \$1.1 billion, or 10%, as compared to the prior year. The quarter over quarter and year over year increases were mainly driven by growth in lending assets, partially offset by a decrease in short-term investments.

Refer to the Regulatory Capital section for further discussion on regulatory capital, capital ratios and risk weighted assets.

Total risk-weighted assets	\$ 11.6 Billion
Total capital	\$ 2 Billion
CET1 Capital Ratio	14.9%
Tier 1 Capital Ratio	16.8%
Total Capital Ratio	16.9%

Credit ratings

On September 10, 2025, S&P Global Ratings (“S&P”) validated Manulife Bank’s long-term deposit rating of A+ and its short-term deposit rating of A-1 with a stable outlook. On June 26, 2025, DBRS Limited and affiliated entities (“Morningstar DBRS”) confirmed Manulife Bank’s long-term issuer rating at AA (low) and its short-term issuer rating of R-1 (middle) with a stable trend.

As of March 31, 2026

S&P

Short-term rating	A-1
Long-term rating	A+

Morningstar DBRS

Short-term rating	R-1 (middle)
Long-term rating	AA (low)

OVA: Bank risk management approach

The Bank’s key risks are strategic, credit, market, liquidity and operational. The Bank manages these risks using an Enterprise Risk Management (“ERM”) framework. The Bank aims to balance risk levels with business objectives for growth and profitability.

Risk Management Framework

The Bank’s ERM framework sets out policies and standards of practice related to governance, identification, measurement, monitoring, control and mitigation of risk. The Chief Risk Officer (CRO) is accountable for developing, establishing, implementing, maintaining and enhancing the ERM framework.

In addition, risk management programs are in place for each of the Bank’s broad risk categories: strategic, market, credit, liquidity, and operational. These programs incorporate policies and standards of practice that are aligned with the ERM framework covering:

- Assignment of risk management accountabilities;
- Philosophy and appetite related to assuming risks;
- Establishment of specific risk targets or limits;
- Delegation of authorities related to risk-taking activities;
- Identification, measurement, assessment, monitoring and reporting of risks; and
- Activities related to risk control and mitigation.

To enable the achievement of its mission and strategic priorities, the Bank is committed to a set of shared values, which reflect our culture, inform our behaviours, and help define how we work together. Within this context the Bank strives for a risk aware culture, where individuals and groups are encouraged, feel comfortable and are proactive in making transparent, balanced risk-return decisions that are in the long-term interests of the Bank.

The Manulife Code of Business Conduct and Ethics (the “Code”) affirms the Company’s commitment to ethical conduct and its practice of complying with all applicable laws. It is the obligation of all employees to comply with the Code. In addition, it is each employee’s responsibility to identify, disclose and avoid potential or actual conflicts of interest.

The Bank’s risk framework follows the following governance model to deliver effective risk management:

Senior Management is ultimately accountable for the development, implementation and oversight of an effective risk management framework.

Business and Central Functions are responsible for ensuring that the Bank’s business strategies align with its risk-taking philosophy, risk appetite and culture. Furthermore, the functions evaluate and manage risk exposures consistent with ERM policies and standards of practice. The functions are also responsible for delivering returns commensurate with the level of risk assumed.

Independent Oversight is comprised of the CRO and the risk management group. The risk management group provides independent oversight (including validation and verification) and challenges assumptions regarding risk-taking and risk mitigation activities. Furthermore, the Bank Executive Risk Committee provides support to the executive leadership team for overseeing general risk-taking and risk mitigation activities.

Independent Assurance is comprised of Audit Services who provides independent, objective assurance and consulting services of sufficient scope to add value, improve the operations of the Bank and enable the Board of Directors to satisfy its fiduciary and legal responsibilities.

Risk governance and management structure

Risk governance in the Bank is managed by the Bank’s Board of Directors (BOD) and several executive management committees.

Board of Directors

The Board of Directors is responsible for overseeing the Bank’s management of its principal risks. The Board of Directors reviews and approves the Enterprise Risk policy, risk-taking philosophy, and overall risk appetite with the assistance of the Board committees. The Chief Executive Officer (CEO) is directly accountable to the Board of Directors for all risk-taking activities and risk management practices and is supported by the Chief Risk Officer (CRO) and the Executive Management Committees. The Executive Management Committees establish risk policies, guide risk-taking activities, monitor significant risk exposures, and sponsor strategic risk management priorities for the Bank.

The Audit & Conduct Review Committee of the Board is responsible for assisting the Board of Directors with its oversight of the quality and integrity of financial information, the effectiveness of internal controls over financial reporting, the effectiveness of compliance with legal and regulatory requirements and the effectiveness of risk management and compliance practices. The Committee also oversees compliance with policies and procedures related to conflicts of interest, confidentiality of information, customer complaints and related party transactions.

The Risk Committee of the Board is responsible for assisting the Board of Directors with its oversight of the management of principal risks, including the effectiveness of internal controls over principal risks and the effectiveness of compliance with risk management policies.

Executive management committees

The Bank has established several roles and committees as part of its governance and management structure. The committees are forums to raise and share risk issues between business lines and risk functions.

The Bank Executive Risk Committee (ERC) provides advisory support to senior management regarding governance and risk oversight. The Bank ERC also provides an executive forum for discussing and reviewing the Bank's risk philosophy and appetite, risk limits, risk exposures and opportunities for optimizing risk taking within the context of the Bank's business model and short-term and long-term strategic objectives. The Bank ERC is responsible for providing oversight related to the management of all risk exposures against approved policies and limits, risk management strategies, and the oversight of the ERM framework which covers risk appetite, risk management responsibilities, risk identification, measurement and assessment, risk monitoring, reporting, control, and mitigation activities.

The ERC may delegate, in its discretion, all or a portion of its duties to sub-committees. Established sub-committees include the Asset Liability Committee (ALCO), the Credit Risk Committee (CRC), the Operational Risk and Resilience Committee (ORRC) and Capital Management Committee (CMC).

ALCO establishes structural interest rate risk (market) and liquidity risk policies and oversees related market and liquidity risk and asset liability management programs and practices. ALCO monitors the overall market risk profile, key and emerging risk exposures and risk management activities as well as compliance with related policies.

The CRC establishes credit risk policies and oversees credit risk management, including setting appropriate management level limits for investment/connections. The CRC monitors the overall credit risk profile, key and emerging risk exposures and risk management activities and ensures compliance with credit risk policies. The CRC also approves large individual credits and investments.

The ORRC establishes and oversees the execution of the operational risk framework, policies, and standards of practice. ORRC monitors the overall operational risk profile, key and emerging risk exposures and risk management activities as well as compliance with related policies.

The CMC establishes capital management policies and is responsible for the oversight of the capital management program.

Risk reporting

Risk exposures of the Bank are monitored and reported to senior management, the executive management committees, and Board of Directors on a regular basis.

Credit Risk

Credit risk exposures are monitored and reported to the Board of Directors, the Bank CRC and ERC, and MFC's Credit Risk Management Department on a quarterly basis. The Chief Risk Officer and the Bank's CRC set out objectives related to the overall quality and diversification of lending portfolios and establish criteria for the selection of counterparties and intermediaries. The CRO monitors compliance with all credit policies and limits. The Board of Directors is responsible for reviewing and approving key credit risk management policies.

Market Risk

The Board has ultimately delegated the responsibility for the strategic management of market, interest rate and liquidity risks to ALCO. The ALCO risk management strategy addresses interest rate risk arising between asset returns and supporting liabilities and is designed to keep potential losses stemming from these risks within acceptable limits. Actual investment positions and risk exposures are monitored to ensure adherence to policy guidelines and limits. Positions are reported to ALCO monthly and to MFC's Global ALCO on a quarterly basis.

Liquidity Risk

The Board of Directors has ultimate oversight responsibility for liquidity risk management of the Bank with liquidity management responsibilities delegated to the CFO and Treasurer. The Chief Risk Officer is responsible for the independent oversight of liquidity risk taking and mitigation activities. ALCO is responsible for the management and monitoring of liquidity risk.

At least annually, the Board of Directors reviews and approves the Market and Liquidity Risk Management Policy and reviews the Liquidity Contingency Plan (LCP), which ensures the Bank has the infrastructure and control functions in place to meet expected and unexpected liquidity obligations. Risk tolerances and limits are approved by the Board of Directors and define the maximum level of liquidity risk the Bank is willing to take. The LCP outlines various liquidity statuses and includes procedures, action plans, communication requirements and roles and responsibilities under each liquidity status. There are four Liquidity Status Levels designed to identify and address various liquidity positions. ALCO determines the Bank's appropriate liquidity status level and mitigation actions at each monthly and special ALCO meeting.

Operational Risk

The Bank's Operational Risk Management (ORM) Policy and Framework outline the governance structure, risk appetite, level of risk tolerance, and sets the foundation for mitigating operational risks across the organization. This framework is designed to align operational risk management practices and procedures to support the Bank's financial, risk, capital, and strategic objectives.

The Bank monitors and reports on operational risk on a regular basis. The Bank Executive Risk Committee (ERC) and Risk Committee of the Board receive quarterly Risk Management reports that reflect any breaches of the Bank's risk tolerance/appetite, recent significant risk events and losses, and any evolving risks and relevant external events that have the potential to impact the Bank's risk policy adherence and its risk capital. At least annually, the Risk Committee of the Board reviews and approves the Operational Risk Management Policy.

Stress Testing

Stress testing is a risk management technique used by the Bank to evaluate the potential effects of a set of specified changes in risk factors on its financial condition. These changes in risk factors correspond to exceptional but plausible events. Stress testing includes both scenario analysis and sensitivity testing. Stress testing is an integral part of the Bank's Risk Management framework, as it facilitates risk identification and assessment and is used to support strategic decision-making. As a key component of the Enterprise Risk Management program, stress tests facilitate risk identification and may also contribute to the development of risk controls and mitigation strategies.

The Bank performs stress tests on its material risk exposures, including but not limited to credit, market, liquidity, and operational risks. Each of these material risks are currently stressed separately and added together to provide a view of total capital required in the stressed-case scenario. Whenever appropriate, the Bank also uses expert judgement to calculate and assess additional capital requirements given specific risks identified.

Risk Strategies

For details on the Bank's strategies and processes to manage, hedge and mitigate risks please refer to the following sections contained in this report:

- Credit risk management strategy and credit risk mitigation techniques on page 13 and 16
- Market risk management strategy on page 32
- Operational risk management strategy on page 34
- Interest rate risk management strategy on page 36
- Liquidity risk management strategy on page 37

Regulatory Capital

Our consolidated regulatory capital requirements are determined by OSFI's SMSBs Capital and Liquidity Requirements, Capital Adequacy Requirements Guideline and Leverage Requirements Guideline.

Manulife Bank has adopted Basel III banking reforms in accordance with the OSFI's revised capital, leverage, liquidity, and disclosure requirements. These reforms enhance the risk management capabilities and resilience of Canadian deposit-taking institutions.

The Bank manages its capital in accordance with guidelines established by OSFI, based on standards set by the Basel Committee on Banking Supervision (BCBS). OSFI's Capital Adequacy Requirements (CAR) Guideline specify the application of Basel III rules to Canadian banks. OSFI has mandated that all Canadian regulated financial institutions to maintain minimum Capital Ratios: a CET1 Ratio of 7.0%, a Tier 1 Capital Ratio of 8.5%, and a Total Capital Ratio of 10.5%. To govern the quality and quantity of capital necessary based on the Bank's inherent risks, we employ an Internal Capital Adequacy Assessment Process (ICAAP) to assess the capital needed to cover unexpected losses arising from credit risk, market risk and operational risks. MBC's approach to capital management is aligned to support its business model and strategic direction.

Regulatory approaches used to determine capital requirements

Credit risk

Banks are permitted a choice of two methodologies in determining the capital requirements for credit risk: the Internal Ratings Based ("IRB") or Standardized Approach. Under the IRB Approach, banks are permitted to determine risk weightings for on and off-balance sheet exposures using internal risk formulas. The Standardized Approach requires banks to assign risk weightings to on and off-balance sheet exposures as prescribed by OSFI under the CAR Guideline. MBC and MTC apply the Standardized Approach when determining capital requirements for credit risk.

Market risk

Market risk capital is calculated using one of two methodologies: the Standardized Approach or Internal Models. These requirements apply to banks designated by OSFI as domestic systemically important banks (D-SIBs) and other internationally active institutions. The capital requirements for market risk are not applicable to MBC and MTC.

Operational risk

There are two methodologies for calculating operational risk capital: the Standardized Approach and the Simplified Standardized Approach (“SSA”). MBC and MTC currently apply the SSA. Under the SSA, institutions must hold operational risk capital equal to 15% of average annual Adjusted Gross Income over the previous 12 fiscal quarters. Risk-weighted assets (“RWA”) for operational risk are equal to 12.5 times operational risk capital.

KM1: Key Metrics

Credit Risk

CRA: General qualitative information about credit risk

Credit risk is the risk of loss due to the inability or unwillingness of a borrower or counterparty to fulfil its payment obligations. Credit risk is one of the most significant risks to the Bank's business, and exists in its lending activities, investment activities and derivative transactions.

Risk management strategy

The Bank's credit risk management practices are strong. Risk identification, monitoring, limit-setting and enforcement processes are well developed and comparable to industry leading practices. Relevant underwriting metrics remain consistent across all distribution channels given policy alignment, embedded quality control, and structured communication. Current originations continue to be appropriate, within limits, and aligned to Bank risk appetite.

The Bank has established policies that set exposure limits by borrower, quality rating, industry and geographic region. The Chief Risk Officer, together with the Bank Executive Risk Committee, sets out objectives related to the overall quality and diversification of lending portfolios and establishes criteria for the selection of counterparties and intermediaries. The Chief Risk Officer monitors compliance with all credit policies and limits and reports the results to senior management and Board of Directors.

The Bank establishes policies and procedures to provide an independent assessment of the existence, quality and value of the credit portfolios, the integrity of the credit process, and to promote the detection of related problems. Internal Audit Services performs periodic assessments of compliance with credit policies and procedures of credit granting and investment originating units.

The Board of Directors of both MBC and MTC ("Board of Directors") are responsible for reviewing and approving all key credit risk management policies. A review system sensitized to prescribed total credit exposure and risk rating thresholds is in place and is maintained with the intent that:

- The borrower's current financial condition is known;
- Collateral security is adequate and enforceable relative to the borrower's current circumstances;
- Credits are in compliance with covenants and margins;
- Early identification and classification of at-risk credit is possible;
- Current information regarding the quality of the loan portfolio is available; and
- Higher risk credits are reviewed in order to assess the risk of default.

The Bank's risk rating systems are designed to assess and monitor credit risk. The risk assessment and monitoring processes for the lending portfolio and derivatives contracts are described below.

Lending Portfolio

Our lending business is focused on residential properties, commercial mortgages, investment loans and lending against insurance. We have no exposure to oil and gas or other carbon heavy industries. Insured mortgages are insured against loss caused by borrower default under a loan secured by real property. Insurance is provided by the Canada Mortgage and Housing Corporation (“CMHC”) or other authorized insurers.

MBC’s flagship product, Manulife One, is an all-in-one banking solution that combines a client’s savings and borrowings into one Home Equity Line of Credit (“HELOC”) product. This can include a client’s traditional mortgage loan, personal loan, lines of credit, and chequing and savings accounts. The Proactive Account Monitoring program is a client engagement program that uses predictive indicators of potential default to select accounts for proactive remediation. High risk clients are contacted before they enter arrears and are encouraged to undertake actions to reduce their borrowing and maintain their good standing.

Derivatives

The Bank has established policies and limits for managing credit risk exposures that may arise with counterparties when entering into derivative transactions. The Bank enters into master netting arrangements that permit the offsetting of contracts in a loss position in the case of a counterparty default. The Bank measures derivative counterparty exposure as net potential credit exposure, which takes into consideration mark-to-market values of all transactions with each counterparty, net of any collateral held, and an allowance to reflect future potential exposure.

¹A defaulted exposure is defined as one that is past due for more than 90 days or is an exposure to a defaulted borrower under CAR 2026, Chapter 4, Section 4.1.21.

CRC: Qualitative disclosure related to credit risk mitigation techniques

Risk control and mitigation

Diversification

MBC's credit risk governance policies require an acceptable level of diversification. Limits are in place for several portfolio dimensions including industry, geography, single-name concentrations, and transaction-specific limits. Although the Bank's credit portfolio is heavily weighted to Canadian residential mortgages and other loans, the portfolio is well-diversified geographically within Canada. Credit risk exposures are monitored for concentration risk and such findings are reported to the Board of Directors, the Risk Committee and MFC's credit risk management department on a quarterly basis.

Lending portfolio

In the normal course of business, various indirect commitments are outstanding that are not reflected on the Consolidated Statements of Financial Position, including commitments to extend credit in the form of loans or other financing for specific amounts and maturities. These financial commitments are subject to normal credit standards, financial controls and monitoring procedures.

Collateral management

Collateral is an integral part of the Bank's credit risk mitigation in its lending portfolio. The purpose of collateral for credit risk mitigation is to minimize losses that would otherwise be incurred, and the Bank generally requires borrowers to pledge collateral when advancing credit. Residential real estate and liquid investments are examples of acceptable collateral.

Credit Counterparty Risk

CCRA: Qualitative disclosure related to CCR

Derivative strategies are approved at the Bank for hedging purposes only and are governed by the Bank's Investment Standard that is approved by ALCO. To mitigate the unique risks associated with the use of derivatives, the Bank has specific risk management policies and processes, authorized types of derivatives, and robust controls surrounding the usage of these derivatives. Over-the-Counter (OTC) transactions expose the Bank to Counterparty Credit Risk (CCR) and the Bank actively takes steps to mitigate and minimize these exposures, including:

- The Bank only enters into transactions with approved, highly rated counterparties;
- All derivative contracts are governed by an ISDA agreement and Credit Support Annex (CSA) that mitigate Counterparty Credit risk through netting and bilateral collateral posting as per the initial and variation margin requirements.

A rating downgrade of Manulife Bank would have no material impact on the collateral posted by the Bank to a counterparty. The haircut applied to collateral is based on the rating of the underlying security.

Market Risk

Market risk is the risk of loss resulting from market price volatility, interest rate changes and adverse foreign currency rate movements. Market price volatility relates to changes in the prices of publicly traded equities and to impacts of interest rate movements on the lending portfolio.

Governance structure

The Risk Committee of the Board annually reviews and approves the Capital Management and Market and Liquidity Risk Management policies. The Board has ultimately delegated the responsibility for the strategic management of market, interest rate and liquidity risks to the Asset Liability Committee (“ALCO”). The ALCO risk management strategy addresses interest rate risk arising between asset returns and supporting liabilities and is designed to keep potential losses stemming from these risks within acceptable limits. Actual investment positions and risk exposures are monitored to ensure adherence to policy guidelines and limits. Positions are reported to ALCO on a monthly basis and to MFC’s Global ALCO on a quarterly basis. The Bank invests in common equities based on limits set within the Investment Standard.

Securities

Debt securities are classified and measured as fair value through other comprehensive income (“FVOCI”) financial instruments as the contractual terms of the financial asset give rise, on specified dates, to cash flows that are solely payments of principal and interest (“SPPI”) and the financial assets are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets. Debt securities are recognized initially at fair value plus directly attributable transaction costs and are subsequently presented in the Consolidated Statements of Financial Position at fair value. Unrealized gains and losses on FVOCI debt securities are recorded in other comprehensive income (“OCI”) except for unrealized gains or losses attributable to foreign currency translation, which are included in income. When FVOCI debt securities are sold, the unrealized gains or losses are transferred from accumulated other comprehensive income (“AOCI”) to the Consolidated Statements of Income. As at March 31, 2026, the total pre-tax unrealized gain recorded in AOCI related to FVOCI debt securities was \$1 million (December 31, 2025– unrealized gain of \$2 million). The cumulative realized gains arising from the sale of FVOCI debt securities for the three months ended March 31, 2026 was nil (three months ended March 31, 2025 – nil).

Debt securities measured as FVOCI are subject to the impairment of financial assets requirements of IFRS 9. The expected credit losses (“ECL”) allowance is based on credit losses expected to arise over the life of the asset. The Bank recognizes a loss allowance at an amount equal to 12-month ECL for those financial instruments that have not yet seen a significant increase in credit risk since origination, and lifetime ECL once there has been a significant increase in credit risk. The Bank assesses at each reporting date, whether credit risk has increased significantly by comparing the risk of default as at the reporting date, with the risk of default as at the date of initial recognition. The ECLs for debt instruments measured at FVOCI do not reduce the carrying amount of these financial assets in the Consolidated Statements of Financial Position, which remains at fair value. Instead, an amount equal to the allowance is recognized in OCI as an accumulated impairment amount, with a corresponding charge to profit or loss. The accumulated loss recognized in OCI is recycled to the profit and loss upon derecognition of the assets. ECL recognized as at March 31, 2026 was \$nil (December 31, 2025 - \$nil).

For debt issues, External Credit Assessment Institutions (“ECAI”) ratings are used for managing market risk and, if not available, MLI’s internal risk ratings are used. When ratings from more than one approved agency are available for a single issue, the priority sequence of rating agencies is Standard & Poor’s (“S&P”), Moody’s Investor Service, DBRS, Fitch Rating Services, and the parent company’s internal risk rating.

Equity securities are classified and measured at fair value through profit or loss (“FVTPL”) as these instruments contain contractual cash flows that do not meet the SPPI test (dividend is discretionary and capital gain is not contractual). As at March 31, 2026, the Bank held \$101 million of publicly traded FVTPL equity securities (December 31, 2025 – \$95 million). Equity securities are measured initially at their fair value plus directly attributable transaction costs and are subsequently presented in the Consolidated Statements of Financial Position at their fair values using published bid prices. Changes in fair value and realized gains and losses are recognized in non-interest income in the Consolidated Statement of Income under net gains (losses) on securities. Dividend income is recorded in interest income. Net realized gain arising from the sale of FVTPL equity securities for the three months ended March 31, 2026, were \$1 million (March 31, 2025 – \$1 million). Net unrealized gains recognized in profit or loss for the three months ended March 31, 2026, were \$4 million (a loss of \$0.1 million for the three months ended March 31, 2025).

Operational Risk

ORA: General qualitative information on a bank's operational risk framework

Operational risk is the risk of loss resulting from inadequate or failed internal processes, systems failures, human performance failures or from external events.

Key risk factors

Operational risk is inherent in all of MBC's business activities and encompasses a broad range of risks including regulatory compliance failures, legal disputes, technology failures, business interruption, information security and privacy failures, ineffective human resource management, processing errors, modeling errors, ineffective business integration, theft and fraud and damage to physical assets. Exposures can take the form of financial losses, regulatory sanctions, loss of competitive positioning and damage to reputation. Operational risk is embedded in all the practices used to manage other risks such as credit risk, market risk and liquidity risk. If not managed effectively, operational risk can impact the ability to manage these key risks.

Risk management strategy

The Bank's risk control processes are established and communicated through approved policies, and associated management approved standards, procedures, control limits, and delegated authorities which reflect the Bank's risk appetite and risk tolerances.

MBC's Operational Risk Management Policy and Framework outline the governance structure, risk appetite, risk limits and sets the foundation for mitigating operational risks. This base is strengthened by the establishment of appropriate internal controls and systems and by seeking to retain trained and competent people throughout the organization. Risk management programs have been established across functional business areas for specific operational risks that could materially impact the ability to do business or negatively impact the reputations of MBC, MTC and PCMT II.

To ensure effective oversight of risks in the organization, the Bank has established a risk governance structure that includes Bank Senior Management and Risk Committees that ultimately report to the Board. The Board and the Board Risk Committee are responsible for overseeing the Bank's management of its principal risks. The Board Risk Committee and the Bank's CEO delegate the oversight of risk-taking activities and risk management practices to the CRO.

The Bank Executive Risk Committee (ERC) supports the CRO in the oversight of risk taking and risk management activities. The Bank Executive Risk Committee is responsible for providing oversight related to the management of all risk exposures against approved policies and limits and risk management strategies, and the overall oversight of the Risk Management framework covering risk appetite, risk management responsibilities, risk identification, measurement and assessment, risk monitoring, reporting, control, and mitigation activities.

Business area managers are accountable for the day-to-day management of the operational risks inherent in their operations. Business and functional areas perform risk control self-assessments to identify, document and assess inherent operational risks and the effectiveness of internal controls.

The Bank's CRO and Risk Oversight team provide independent oversight of risk taking and risk mitigation activities across the enterprise. Key risk indicators are monitored and provide early warnings of emerging control issues. Business area managers proactively modify procedures where emerging control issues are identified.

The Bank monitors and reports on enterprise risk on a regular basis. The Bank Executive Risk Committee and Risk Committee of the Board receive quarterly Risk Management reports that reflect any breaches of the Bank's risk tolerance/appetite, recent significant risk events and losses, and any evolving risks and relevant external events that have the potential to impact the Bank's risk policy adherence and its risk capital.

There is an established process in place for the identification and assessment of top and evolving risks. The Bank maintains an Evolving Risk Landscape of operational risks and controls, which are assessed for risk exposure and control effectiveness on a periodic basis. The process allows the Bank to track management action plans taken to mitigate risks or close control gaps. In addition, the Bank has clear procedures governing when and how risk events and issues are brought to the attention of Bank Senior Management and the Bank Executive Risk Committee.

The Bank's approach to risk control also includes risk and capital assessments to appropriately capture key risks in the Bank's measurement and management of capital adequacy. OSFI requires the Bank to hold regulatory operational risk capital. The required operational risk capital calculation is included in the Bank's Internal Capital Adequacy Assessment Process, which considers both Pillar 1 regulatory capital and Pillar 2 capital in relation to the entity's risk profile, strategy, business plans, business complexity, and range of business activities.

IRRBB – Risk management objectives, policies, and quantitative information

Interest rate risk

Interest rate risk is identified as the potential impact of adverse market movements on the Bank’s net interest income and economic value of its capital. The Bank measures this by projecting asset and liability cash flows under a range of interest rate scenarios. The Bank takes into consideration loan prepayments, loan commitments and the behaviour of non-maturity deposits in its calculation of the risk metrics. The Bank applies prescribed and internal interest rate shocks to assess interest rate risk and reports these to ALCO monthly. This ensures risk is managed within the set risk appetite. Key assumptions of the interest rate model are reviewed and approved annually by ALCO to ensure that they remain reasonable and appropriate.

Derivative contracts are employed, when appropriate, for asset-liability management purposes to manage interest rate risk within desired tolerances.

The following table shows the sensitivity to a sudden and sustained 100 basis points parallel shock in interest rates to MBC’s net interest income (“NII”) measured over a 12-month horizon and its economic value of equity (“EVE”). The actual sensitivity outcome may vary depending on multiple factors, including changes to the current positions and management actions.

Interest Rate Risk ^(1,2)

	Q1 2026		Q4 2025		Q3 2025	
	NII risk	EVE	NII risk	EVE	NII risk	EVE
100 basis points rate increase	\$ 25	\$ 3	\$ 13	\$ (13)	\$ 14	\$ (4)
100 basis points rate decrease	\$ (25)	\$ (2)	\$ (13)	\$ 14	\$ (14)	\$ 4

	Q2 2025		Q1 2025	
	NII risk	EVE	NII risk	EVE
100 basis points rate increase	\$ 10	\$ (5)	\$ 2	\$ (9)
100 basis points rate decrease	\$ (10)	\$ 5	\$ (2)	\$ 9

⁽¹⁾ A parallel movement in interest rates includes a change in government, swap and corporate rates, with a floor of zero.

⁽²⁾ The interest sensitivity assumes that the Bank moves all Bank-administered rates for lending and deposits directly with market rates. The Bank has the ability to mitigate margin impact through its administered rates.

B6 Disclosures – Liquidity risk

Liquidity risk is the risk of not having access to sufficient funds or liquid assets to meet both expected and unexpected cash and collateral demands.

At least annually, the Board of Directors reviews and approves the Liquidity and Market Risk Management Policy and reviews the Liquidity Contingency Plan, which ensures the Bank has the infrastructure and control functions in place to meet expected and unexpected liquidity obligations. Risk limits are approved by the Board of Directors and define the maximum level of risk the Bank is willing to take regarding liquidity risks. The Liquidity Contingency Plan outlines various liquidity statuses and includes procedures, action plans, communication requirements and roles and responsibilities under each liquidity status.

Liquidity stress testing is completed monthly to monitor and identify sources of potential liquidity strain, and to ensure current exposures remain in accordance with the Bank's established liquidity risk tolerance and limits. In addition to the Bank's internal metrics, the Bank must also comply with OSFI's Liquidity Adequacy Requirements ("LAR") Guideline, which includes the Net Cumulative Cash Flow ("NCCF") and the Liquidity Coverage Ratio ("LCR"). Key assumptions of the internal stress tests are reviewed and approved annually by ALCO to ensure that they remain reasonable and appropriate.

Liquid assets include unencumbered assets that are marketable, can be pledged as security for borrowings, and can be converted to cash in a timeframe that meets liquidity requirements. The Bank's unencumbered liquid assets as at March 31, 2026, were \$5.1 billion (15 per cent of total assets) compared to \$6.3 billion as at December 31, 2025 (19 per cent of total assets).

Both the NCCF and LCR regulatory minimums were met by the Bank during the three months ended March 31, 2026.

As a federally regulated bank and member of Payments Canada, Manulife Bank also has access to the Bank of Canada's Standing Term Liquidity Facility.

Governance structure

The Board of Directors has ultimate oversight responsibility for liquidity risk management of the Bank with the Risk Committee of the Board assisting the Board in carrying out this responsibility. The liquidity management responsibilities are ultimately delegated to the CFO & Treasurer. The CRO is responsible for the independent oversight of liquidity risk taking and mitigation activities. ALCO is responsible for the management and monitoring of liquidity risk.

Funding

The Bank has developed and continues to develop strategies to diversify funding sources in terms of funding channels and products, taking into consideration the level of reliance on individual funding sources. Diversification of funding is continually monitored and reported to ALCO and the Board of Directors. The Bank's ability to securitize high quality residential mortgage loans has provided a key source of diversified funding and contingent liquidity. Securitization funding provides the Bank with long-term funding at attractive interest rates.

Securitization

The Bank acts in the capacity of sponsor, originator, servicer, and the provider of credit enhancements for its securitization programs. Mortgage loans purchased by the Bank from third-parties and securitized in the NHA MBS program continue to be serviced by the third-party mortgage servicer. In addition, the Bank also invests in short and long-term investment grade asset-backed securities. The sections below provide an overview of the Bank's securitization programs.

Manulife One securitization programs

MBC has established the Platinum Canadian Mortgage Trust II ("PCMT II") program to securitize high quality uninsured Manulife One accounts. The PCMT II securitization program diversifies MBC's funding capabilities by providing an additional source of funding. The availability of multiple funding channels enhances MBC's ability to obtain low-cost funds and provides increased liquidity. Eligibility criteria are defined in the program documentation. These accounts are pooled by MBC and undivided co-ownership interests in the receivables of the pool are then sold to the program in exchange for cash. The program funds the purchase of the co-ownership interests by issuing term notes. The pool of Manulife One accounts supporting the notes is legally isolated from MBC's assets and the cash flows generated from the pool are used to provide interest and principal payments on the term notes. MBC's continuing involvement includes servicing the pool of Manulife One accounts and performing an administrative role for the programs. MBC also provides loans to the program to pay for upfront transaction costs. These loans are subordinate to all notes issued by PCMT II.

MBC provides credit enhancements to PCMT II in the form of an asset pool balance in excess of notes issued, credit enhancement of the ownership interest, and excess spread consisting of excess cash receipts that are only attributable to MBC after the periodic obligations of PCMT II have been met. As at March 31, 2026, cash reserve accounts have been funded for PCMT II in the amount of \$5 million (December 31, 2025 – \$9 million). The cash reserve account for PCMT II is funded according to criteria defined in the series agreements.

During the three-month period ended March 31, 2026, no secured term notes was issued under PCMT II (three-month period ended March 31, 2025 – nil). As at March 31, 2026, term notes worth \$3,500 million (December 31, 2025 – \$3,500 million) are outstanding.

NHA MBS securitization program

MBC securitizes insured amortizing Canadian residential mortgage loans through the NHA MBS program and either holds the securities on the Consolidated Statements of Financial Position or sells them to third party investors. MBC expects to continue to issue NHA MBS in volumes consistent with the growth of insured mortgage assets, subject to CMHC allocations of guarantees for new market NHA MBS.

CMB securitization program

The CMB program represents the lowest cost funding alternative for the Bank's insured amortizing mortgage products. CMB issuances are backed by NHA MBS pools and the payment structure consists of semi-annual coupon payments and a bullet payment at maturity. At issuance of a CMB, a secured borrowing liability is recorded and the related residential mortgages backing the CMB remain on the Bank's Consolidated Statements of Financial Position.

Securitization accounting

The Bank's internal Manulife One securitization program does not meet derecognition requirements. Securitized Manulife One accounts remain on MBC's Consolidated Statements of Financial Position as the Bank retains the pre-payment and interest rate risk associated with these accounts, which represents substantially all of the risks and rewards associated with the transferred assets. These transactions are accounted for as secured financing transactions and MBC continues to recognize the accounts as assets and records a secured borrowing liability (i.e. notes payable, which is accounted for at amortized cost). Interest income on the assets and interest expense on the notes payable are recorded using the effective interest rate method. Transactions under the Bank's internal securitization programs are consolidated with MBC.

Residential mortgage loans securitized through the NHA MBS program also remain on MBC's Consolidated Statements of Financial Position as the Bank retains the pre-payment and interest rate risks. MBC also retains the interest spread between the securities and the underlying mortgage assets. If MBC creates an NHA MBS security without selling it, a liability is not recognized. All securitization exposures are included in the banking book.

The Bank also purchases CMHC insured multi-unit residential mortgages from third party originators with negligible pre-payment and credit risk. These mortgages are pooled within the NHA MBS program and subsequently sold into the CMB program. In the event that the Bank is unable to sell the entire NHA MBS to the CMB program, the remaining portion will be sold to the market. The transaction structure meets specific criteria and qualifies for balance sheet derecognition with an upfront gain recorded on the sale of mortgages. The Bank retains a residual interest, which is recorded as securitization retained interest on the Bank's Consolidated Statements of Financial Position.

Capital treatment for securitization exposures

As discussed within the Capital Management section of this document, MBC utilizes the standardized approach to assign risk weightings to assets, including mortgages in the NHA MBS and PCMT II program that do not qualify for derecognition as detailed above, as well as securitization exposures resulting from short-term and long-term investments. The Bank assigns credit assessments from OSFI authorized ECAI.

Summary of Securitized Mortgages					
Securitization program	Q1 2026	Q4 2025	Q3 2025	Q2 2025	Q1 2025
Manulife One securitization					
Securitized mortgages - PCMT II ⁽¹⁾	\$ 3,500	\$ 3,500	\$ 3,250	\$ 3,250	\$ 3,000
Restricted cash ⁽²⁾	5	9	9	17	16
Total Manulife One securitization	\$ 3,505	\$ 3,509	\$ 3,259	\$ 3,267	\$ 3,016
NHA MBS securitization					
NHA MBS unsold	\$ 2,417	\$ 2,867	\$ 1,818	\$ 2,241	\$ 2,001
Restricted cash ⁽²⁾	64	40	40	40	40
Total NHA MBS securitization	\$ 2,481	\$ 2,907	\$ 1,858	\$ 2,281	\$ 2,041
Sold to CMB and Market	4,076	3,357	3,778	3,305	3,446
Total	\$ 10,062	\$ 9,773	\$ 8,895	\$ 8,853	\$ 8,503

⁽¹⁾ The Securitized mortgage balance comprises \$750 million (Series 2016-1), \$1,000 million (Series 2018-1), \$1,500 million (Series 2020-1) and \$250 million (Series 2025-1) term notes, supported by a pool of uninsured Manulife One accounts.

⁽²⁾ The securitization programs require issuers to maintain additional cash reserves within the NHA MBS principal and interest custodial account to cover deposits of unscheduled principal payments.

During the three months ended March 31, 2026, \$354 million multi-unit residential mortgages were securitized, sold and derecognized from the Consolidated Financial Statements (three months ended March 31, 2025 – \$373 million), and \$2 million gain on sale was recognized (three months ended March 31, 2025 – \$2 million). As at March 31, 2026, \$4,279 million (December 31, 2025 – \$3,948 million) of insured multi-unit residential mortgages were derecognized from the Consolidated Financial Statements, and securitization retained interests totaling \$148 million (December 31, 2025 – \$141 million) were recorded as Other Assets.

B20 Disclosures

Residential mortgage loans and Manulife One

MBC has a high-quality mortgage loans portfolio. As at March 31, 2026, MBC had \$7.0 billion residential mortgage loans, of which \$6.4 billion (91%) were insured and \$0.6 billion (9%) were uninsured. In addition, the Bank had \$20.3 billion of Manulife One loans of which \$2.6 billion (13%) were insured and \$17.7 billion (87%) were uninsured. Overall, as at March 31, 2026, MBC had \$27.3 billion in residential mortgage and Manulife One mortgage loans of which \$9.0 billion (33%) were insured. All residential mortgage loans and Manulife One mortgage loans were originated in Canada.

The table outlining the residential mortgage loans and Manulife One portfolios by geographic region¹ and type is included in the quantitative disclosures below.

¹ Region is based upon address of property mortgaged.

Average loan-to-value (LTV) ratio

The LTV ratio factors in the amount of collateral value that supports the loan in comparison to the loan value. The LTV ratio on MBC's total uninsured residential mortgage portfolio, including HELOCs was 53% as at March 31, 2026 (December 31, 2025– 54%). This calculation is weighted by mortgage balances and adjusted for property values based on the Teranet – National Bank National Composite House Price Index.

The Bank regularly monitors the credit quality of its portfolio and has implemented a proactive management program, where the Bank takes corrective actions prior to loans going into arrears. The Bank also performs stress tests in order to assess the expected losses on the portfolio in a scenario of a severe shock to the real estate market. The tests indicate that MBC is well positioned to absorb credit losses resulting from conditions assumed in the stress tests.

The following provides a summary of the weighted average LTV ratio by geographic region¹ and type for newly originated and acquired uninsured mortgage loans and HELOCs (including refinances with increase in funds or limits) during the current period.

¹ Region is based upon address of property mortgaged.

B20 - Average LTV Ratios for Uninsured Residential and Manulife One Mortgages Originated During the Quarter

⁽¹⁾ LTV is calculated using the outstanding amount and weighted by the outstanding amount of each loan.

⁽²⁾ Manulife One comprising of both revolving and fixed components is secured by the same collateral (residential property).

⁽³⁾ LTV is calculated based on the authorized limit for revolving component and outstanding amount for the fixed component of Manulife One accounts and weighted by the total borrowing limit for each account. For the revolving component of Manulife One accounts, the average LTV ratio based on the outstanding amount and weighted by total outstanding amount for Manulife One accounts is 45% compared to 57% based on the authorized limits for the three month period ended March 31, 2026, and 44% compared to 57% based on the authorized limits for the three month period ended December 31, 2025.

Residential mortgage loans and Manulife One (fixed²) portfolios by amortization period

A summary of MBC's residential mortgage loans and Manulife One (fixed) by remaining amortization³ period based on the contractual terms of the mortgage agreement is presented in the quantitative section below.

B20 Mortgages by Amortization Period

	Residential mortgages				
	Q1 2026	Q4 2025	Q3 2025	Q2 2025	Q1 2025
<20 years	26%	26%	26%	27%	29%
≥20 and <25 years	59%	61%	62%	64%	67%
≥25 and <30 years	14%	12%	10%	7%	3%
≥30 years	1%	1%	2%	2%	1%
Total	100%	100%	100%	100%	100%

	Manulife One (fixed)				
	Q1 2026	Q4 2025	Q3 2025	Q2 2025	Q1 2025
	30%	30%	29%	29%	29%
	37%	38%	39%	40%	41%
	31%	30%	30%	29%	29%
	2%	2%	2%	2%	1%
Total	100%	100%	100%	100%	100%

² Fixed represents the amortizing portion of the Manulife One account.

³ Remaining amortization is the difference between the contractual amortization and the time elapsed since origination.

Glossary

Basel III framework

- Pillar 1 – CAR: Outlines methodologies to calculate capital and set minimum capital requirements;
- Pillar 2 – Supervisory Review: Requires banks to maintain a formal internal capital adequacy assessment process, subject to supervisory review; and
- Pillar 3 – Market Discipline: Complements other pillars by providing enhanced public disclosures to enable market participants to understand the risk profile of the bank and assess the application of Basel III capital requirements.

Risk weighted assets (“RWA”)

Under Basel III, OSFI requires banks to meet minimum risk-based capital requirements for exposures to credit risk, operational risk and market risk, where there are significant trading activities. Risk-weighted assets are calculated for each of these types of risks and added together to determine total risk weighted assets.

Common Equity Tier 1 (“CET1”) capital

Comprised mainly of common shares, retained earnings and AOCI, net of applicable regulatory adjustments.

Additional Tier 1 capital

Consists of Tier 1 instruments issued that do not meet the criteria of CET1, contributed surplus from the issuance of instruments not included in CET1, instruments issued by consolidated subsidiaries not included in CET1, net of applicable regulatory adjustments.

Tier 2 capital

Consists of eligible loan loss allowances and subordinated debt, net of applicable regulatory adjustments.

Capital ratios

Regulatory capital ratios are calculated by dividing CET1, Tier 1 and Total Capital by risk-weighted assets. In addition to the CET1, Tier 1 and Total Capital Ratios, Canadian Deposit-taking Institutions are required to ensure that a Leverage Ratio meets a minimum level prescribed by OSFI. All items that are deducted from capital are excluded from total assets.

Leverage ratio

The Leverage Ratio is calculated by dividing the Bank’s Tier 1 Capital by the Bank’s Total Exposure. The Bank’s Total Exposure is the sum of the following: (a) on-balance sheet exposures; (b) derivative exposures; (c) securities financing transaction exposures; and (d) off-balance sheet exposures.

Efficiency ratio

The ratio represents total money expended to earn a dollar of revenue i.e. a ratio of expense to revenue. A low ratio indicates that the Bank has been efficiently utilizing its resources.
